

Orchestral Templates with VE Pro 5

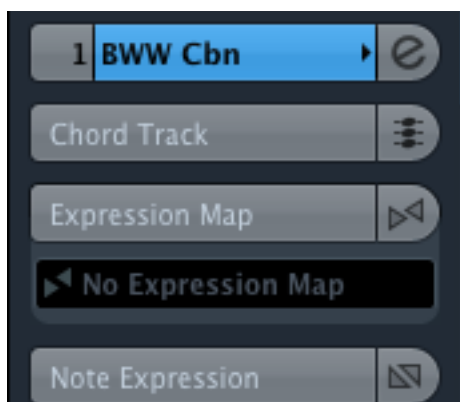

Thank you for downloading this Expression Map set.

Depending on the library, you will find in this package:

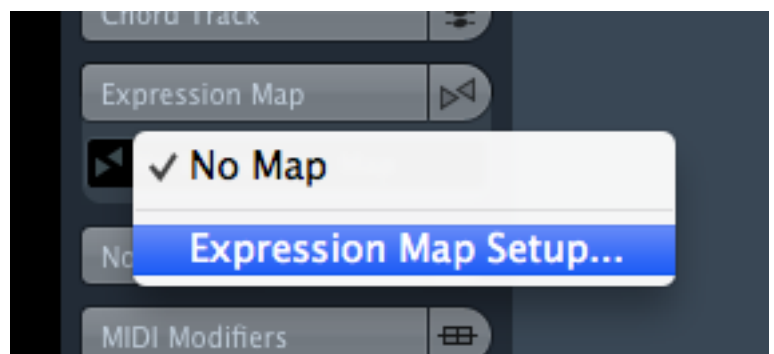

- One or more Expression Maps for Cubase 6/7
- (select libraries) Needed Kontakt 5 multi files for use with the expression maps

You can copy these files wherever you like, but it is recommended to copy them in a special folder (name it "Expression Maps" or so) inside the sample library folder.

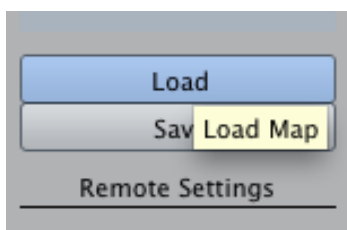

If this set came with Kontakt 5 multis, you need to use these multis for the Expression Map(s) to work! Create a new Instrument Track with Kontakt loaded inside Cubase or connect a new MIDI track to a pre-existing Kontakt instance and load the multi.

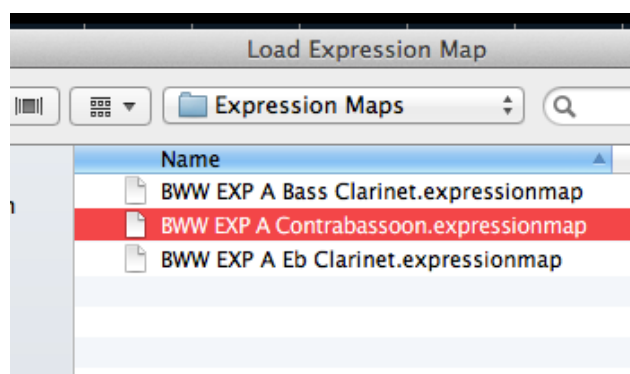

To load the Expression Map, click the corresponding section in the track info area:

Click on the Combo Box and choose Expression Map Setup

In the window that appears select Load

and point Cubase towards your Expression Map.

When the map is loaded, you can select it by clicking on the Combo Box again and selecting the file.
