Introduction

Contents in this Operation Manual

This Operation Manual explains how to use the device. The explanations in this manual assume that you’ve set up the device and prepared it for use according to the Getting Started document. If you haven’t done that yet, refer to the Getting Started document and complete the setup before reading this manual.

Features

High-resolution Microphone Preamplifiers (D-PRE)

Discrete microphone preamps featuring a high-performance inverted Darlington circuit configuration achieve low distortion and noise while delivering sound with eminently musical balance and character.

Convenient Monitor Control

Up to three sets of monitor speakers can be connected to the unit, with versatile control of monitor output provided via convenient buttons and knobs: volume, mute, mono mix, and dimmer. There are two functions (modes) regarding monitor control: the Alternate mode, which lets you select a set of monitor speakers for signal output, and the Independent mode, which lets you select the signals for outputting to each set of monitor speakers simultaneously.

Supports a Variety of Inputs

Switchable phantom power is provided for condenser microphones, electric guitars and basses can be directly connected via a HI-Z (high impedance) input, and a PAD is provided for input matching with high-level signals from electronic instruments. A stereo mini-jack 2TR IN input provides a convenient way to connect portable music players, and coaxial S/PDIF connectors enable direct connection to a variety of digital audio devices.

Powerful DSP Mixer (dspMixFx)

A DSP mixer that can mix up to six input channels to three stereo outputs is built in. A number of DSP effects that can be applied to input signals are also provided, and since it is a hardware mix with there is no monitoring latency.

DSP Effect: Sweet Spot Morphing Channel Strip

The Sweet Spot Morphing Channel Strip (“Channel Strip” for short) is a multi-effect that combines compression and EQ. Advanced sound engineering know-how is condensed into a number of presets that can simply be recalled as required for professional results. Up to four channel strips can be used at a time, and it can be assigned either to the monitor sound only, or to both the monitor and recorded sound.

DSP Effect: REV-X Reverb

REV-X is a digital reverb platform developed by Yamaha for pro audio applications. One REV-X effect is included in this unit. Input signals can be sent to the REV-X effect, and the REV-X effect is applied only to the monitor outputs.

DSP Effect: Guitar Amp Classics

Guitar Amp Classics are guitar amp effects that make extensive use of advanced Yamaha modeling technology. One Guitar Amp Classics effect can be used at a time, and it can be assigned either to the monitor sound only, or to both the monitor and recorded sound.

The maximum number of Channel Strip and Guitar Amp Classics iterations which can be used simultaneously has restrictions. Refer to the “Limitations on the use of effects” (page 36).

DSP Effect VST Plug-ins Included

VST3 Plug-ins (page 33) of the Channel Strip, REV-X and Guitar Amp Classics effects are included for use with Cubase series or similar VST-compatible DAW software.

Free Download of Cubase AI

Steinberg’s Cubase AI digital audio workstation (DAW, page 33) is available free for downloading via our website, specifically for customers who have purchased the UR28M. Cubase AI is the entry-level version of the Cubase series DAW products, providing the basic functionality you need for music production and editing.
**Class Compliant mode**

In Class Compliant mode, the UR28M works with the iPad through the Apple iPad Camera Connection Kit. It can be used with iOS compatible music production applications such as Steinberg Cubasis for convenient high-quality recording anywhere, at any time. A computer can also be used in CC mode.

**Loopback function**

Loopback function facilitates video delivery and other Internet related activities. This function mixes the input audio signals (LINE, Guitar, Mic, etc) and the audio signals playing back in the software into two channels in the UR28M, and back to the computer for live broadcasting via the Internet.
Panel Controls and Terminals (Details)

Rear Panel

1. **DC IN 12V**  
   For connection to the AC power adaptor.

2. **Grounding screw**  
   For connection to a ground wire.  
   If you have a problem with hum or noise, use this terminal to connect to ground. The noise may be reduced.

3. **2TR IN (3.5 mm, stereo)**  
   For connection to a portable audio player.  
   The input signal at 2TR IN flows only to MIX 1 (page 33), and not to the computer.

4. **USB2.0 (USB port)**  
   For connection to a computer or iPad. Apple iPad Camera Connection Kit or Lightning to USB Camera Adapter are required when connecting the UR28M with an iPad.

**USB Port Precautions**

**NOTICE**  
Be sure to observe the following points when connecting to the computer’s USB interface. Failing to do so may result in the computer freezing or shutting down, as well as corruption or even loss of data. If the device or computer does freeze, restart the application or computer.

- Be sure to wake the computer from sleep/suspended/stand by mode before making a connection to the computer’s USB port.
- Before turning on the power to the device, connect the computer to the USB port.
- Before turning on/off the device or plugging/unplugging the USB cable, quit any open application software on the computer.
- When connecting or disconnecting the USB cable, be sure to set all output level controls to the minimum.
- Wait at least six seconds between connecting or disconnecting the USB cable.

5. **S/PDIF IN/OUT (coaxial)**  
   For connection to a digital audio device.  
   S/PDIF OUT outputs one of the MIX 1–3 and DAW OUT signals. To select the output signal, use the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Output Routing Window” (page 20) in the section “Dedicated Windows for Cubase Series”.

   S/PDIF IN is equipped with the SRC (Sampling Rate Converter) function. Even if the sampling rate at which the device is operating differs from the sampling rate of the audio signal input to the S/PDIF IN, the SRC function will automatically convert the rate so that playback will be correct. SRC is only available when INTERNAL is selected as the clock source of the device. To select the clock source of the device, use the “(device name) Window” (page 10) in the section “Control Panel of the Audio Driver” in Windows or Audio MIDI Setup in Mac.

6. **PHONES 1/2 (phone type, stereo)**  
   For connection to a set of headphones.  
   PHONES 1 outputs the MIX 1 signal. PHONE 2 outputs one of the MIX 1–3 signals. To select the output signal of PHONES 2, use the “Headphone Area” (page 15) in the section “dspMixFx UR28M” or the “Headphones Window” (page 20) in the section “Dedicated Windows for Cubase Series.”
LINE OUTPUT A–C (phone type, balanced/unbalanced)
For connection to monitor speakers. When the monitor speakers have a balanced input, connect them with a balanced cable.

There are two functions (modes) on LINE OUTPUTS A–C: Alternate and Independent. In the Alternate mode, one of the LINE OUTPUTS A–C selected by the OUTPUT buttons A–C outputs a single MIX signal selected by the SOURCE SELECT button. In the Independent mode, LINE OUTPUTS A–C output each MIX selected by the SOURCE SELECT button simultaneously.

For details on the mode, including how to select the mode, refer to the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Master Levels Window” (page 21) in the section “Dedicated Windows for Cubase Series.”

LINE INPUT 3/4 (phone type, balanced/unbalanced)
For connection to a digital instrument.

You can select the input signal level of LINE INPUT 3/4 between “+4dBu” and “-10dBV.” Select “+4dBu” when connecting a professional audio device, and select “-10dBV” when connecting a consumer device. The default initial setting is “+4dBu.” To select the input signal level, use the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Settings Window” (page 21) in the “Dedicated Windows for Cubase Series.”

MIC/LINE/HI-Z 1/2 (XLR/phone type, balanced/unbalanced)
For connection to a microphone, digital instrument, electric guitar, or electric bass.
Front Panel

1 HI-Z switch
   Turns on (▶) and off (◀) the HI-Z of the MIC/LINE/HI-Z.
   Turn this switch on when connecting high impedance instruments, such as an electric guitar or electric bass, directly to the MIC/LINE/HI-Z.
   When you turn this switch on, use an unbalanced phone cable for connection between the instruments and the MIC/LINE/HI-Z. If you use a balanced cable or an XLR cable, this device will not work correctly.

   **CAUTION**
   • Do not connect or disconnect a device while turning on the HI-Z switch. Doing so can damage the connected device and/or the unit itself.
   • To protect your speaker system, leave the monitor speakers turned off when turning the HI-Z switch on/off. It’s also a good idea to turn all output volume controls down to their minimum. Neglect of these precautions may result in large noise bursts that may damage your equipment, your ears, or both.

2 PAD switch
   Turns on (▶) and off (◀) the PAD of the MIC/LINE/HI-Z.
   When you turn this switch on, the input signal level of the MIC/LINE/HI-Z will be attenuated by 26 dB. Turn this switch on when connecting high output equipment, such as a synthesizer, to the MIC/LINE/HI-Z.

3 +48V button
   Turns on (lit) and off (dark) the phantom power of the MIC/LINE/HI-Z 1 and 2 (XLR type).
   When you turn this button on, phantom power will be supplied to the MIC/LINE/HI-Z 1 and 2. Turn this button on when connecting phantom powered devices, such as a condenser microphone, to the MIC/LINE/HI-Z 1/2.

   **CAUTION**
   • Make sure that phantom power is turned OFF unless it is needed.
• When turning phantom power ON, make sure that no equipment other than phantom-powered devices such as condenser microphones are connected. Devices other than condenser microphones may be damaged if connected to the phantom power supply. Note, however, that the switch may be left on when connecting to balanced dynamic microphones. When connecting an unbalanced device to the MIC/LINE/HI-Z 1/2 and phantom power is turned on, hum or noise may result; this is not a malfunction or failure in the device.

• Do not connect or disconnect a device while phantom power is applied. Doing so can damage the connected device and/or the unit itself.

• To protect your speaker system, leave the monitor speakers turned off when switching the phantom power on/off. It’s also a good idea to turn all output volume controls down to their minimum. Neglect of these precautions may result in large noise bursts that may damage your equipment, your ears, or both.

INPUT GAIN knob 1/2
Adjusts the input signal level of the MIC/LINE/HI-Z 1/2. The adjustable range varies depending on the on/off setting of the PAD switch.

<table>
<thead>
<tr>
<th>PAD</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>-34 dB – +10 dB</td>
</tr>
<tr>
<td>Off</td>
<td>-60 dB – -16 dB</td>
</tr>
</tbody>
</table>

PHONES knob 1/2
Adjusts the output signal level of the PHONES 1/2. This output signal level is not affected by the OUTPUT LEVEL knob.

PHONES 1 outputs the MIX 1 signals. PHONE 2 outputs one of the MIX 1–3 signals. To select the output signal of the PHONES 2, use the “Headphone Area” (page 15) in the section “dspMixFx UR28M” or the “Headphones Window” (page 20) in the section “Dedicated Windows for Cubase Series.”

2TR IN LEVEL knob
Adjusts the input signal level of the 2TR IN signal.
The input signal at 2TR IN flows only to MIX 1, and not to the computer.

2TR IN ON button
Turns on (lit) and off (dark) the 2TR IN.

INPUT meter
Indicates the input signal level of the analog input jacks (MIC/LINE/HI-Z 1/2 or LINE INPUT 3/4).

Lamp | Description
--- | ---
Red  | Overload
Amber | -3 dB or more
Amber | -14 dB or more
Green | -48 dB or more

To select which analog input jacks’ levels are to be indicated, use the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Settings Window” (page 21) in the section “Dedicated Windows for Cubase Series.”

OUTPUT meter
Indicates the output signal level of the LINE OUTPUT selected by the OUTPUT button A–C.

Lamp | Description
--- | ---
Red  | Overload
Amber | -3 dB or more
Amber | -14 dB or more
Green | -48 dB or more

OUTPUT buttons A–C
For Alternate mode, this selects the particular LINE OUTPUT for output. For example, when you press OUTPUT button A, only LINE OUTPUT A will be selected for output, and OUTPUT button A will light.

For Independent mode, this selects the particular LINE OUTPUT for control. For example, when you press OUTPUT button A, LINE OUTPUT A will be selected for control, and OUTPUT button A will light.

For details on the mode, including how to select the mode, refer to the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Master Levels Window” (page 21) in the section “Dedicated Windows for Cubase Series.”

SOURCE SELECT button
For Alternate mode, this selects the output signal (MIX 1–3) of the LINE OUTPUT.

For Independent mode, this selects the output signal (MIX 1–3) of the LINE OUTPUT selected by OUTPUT buttons A–C.

For details on the mode, including how to select the mode, refer to the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Master Levels Window” (page 21) in the section “Dedicated Windows for Cubase Series.”
**MIX 1–3 lamp**
For Alternate mode, this indicates the output signal (MIX 1–3) of the LINE OUTPUT.

For Independent mode, this indicates the output signal (MIX 1–3) of the LINE OUTPUT selected by OUTPUT buttons A–C.

For details on the mode, including how to select the mode, refer to the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Master Levels Window” (page 21) in the section “Dedicated Windows for Cubase Series.”

**DIM button**
Turns on (lit) and off (dark) the dimmer of all LINE OUTPUT signals.

When you turn on this button, the output signal level of all LINE OUTPUT will be attenuated by 20 dB. Turning on and off this button will not affect the output signal level of PHONES 1/2.

**MONO MIX button**
For Alternate mode, this turns on (lit) and off (dark) the mono mix for the output signal of the LINE OUTPUT.

For Independent mode, this turns on (lit) and off (dark) the mono mix for the output signal of the LINE OUTPUT selected by OUTPUT buttons A–C.

You can confirm the phase or mix balance of the sound by using this button.

For details on the mode, including how to select the mode, refer to the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Master Levels Window” (page 21) in the section “Dedicated Windows for Cubase Series.”

**OUTPUT LEVEL knob**
Adjusts the output signal level of the LINE OUTPUT.

When you turn the LINK (page 16) off in the Independent mode, you can set different output signal levels to each LINE OUTPUT A–C. Press one of the OUTPUT buttons A–C then adjust the output signal level by the OUTPUT LEVEL knob. At this time, the OUTPUT LEVEL knob setting and the output signal level are mismatched immediately after you select the OUTPUT buttons A–C. When you adjust the OUTPUT LEVEL knob, the output signal level is applied immediately.

---

**CAUTION**
When you turn the LINK off, and set the a significant different signal level for each LINE OUTPUT A–C, a high volume level may be produced suddenly by turning the OUTPUT LEVEL knob, possibly causing hearing loss or device damage.

**MUTE button**
For Alternate mode, this turns on (lit) and off (dark) muting of the LINE OUTPUT signal.

For Independent mode, this turns on (lit) and off (dark) muting of the LINE OUTPUT signal selected by OUTPUT buttons A–C.

For details on the mode, including how to select the mode, refer to the “Setup Window” (page 16) in the section “dspMixFx UR28M” or the “Master Levels Window” (page 21) in the section “Dedicated Windows for Cubase Series.”

**Power button**
Turns the power on and off.

<table>
<thead>
<tr>
<th>Power on</th>
<th>Power off</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press the power button ( ). The power button will light.</td>
<td>Hold down the power button ( ) for over two seconds. The power button will light dimly.</td>
</tr>
</tbody>
</table>

**Word clock source lamp**
Indicates the word clock (page 33) source of the device.

<table>
<thead>
<tr>
<th>Lamp</th>
<th>Clock Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>S/PDIF</td>
<td>The word clock signal input to S/PDIF IN.</td>
</tr>
<tr>
<td>INTERNAL</td>
<td>The internal word clock signal.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Lamp status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lit</td>
<td>Synchronized with the clock source.</td>
</tr>
<tr>
<td>Flash</td>
<td>Not synchronized with the clock source.</td>
</tr>
</tbody>
</table>

To select the clock source of the device, use the “(device name) Window” (page 10) in the section “Control Panel of the Audio Driver” in Windows or Audio MIDI Setup in Mac.
Panel Controls for the Software Programs

Introduction
This section explains software operations for using the UR28M with a computer.

NOTE
The software programs below do not apply to iPad.

Control Panel of the Audio Driver
This is the control panel for selecting the general settings of the audio driver. Click the upper tabs to select the desired window.

Screenshot

How to Open the Window

Windows
- [Control Panel] → [Hardware and Sound] or [Sounds, Speech, and Audio Devices] → [Yamaha Steinberg USB Driver]
- From the Cubase series menu, [Devices] → [Device Setup] → [Yamaha Steinberg USB ASIO] → [Control Panel]

Mac
- [System Preferences] → [Yamaha Steinberg USB]
- From the Cubase series menu, [Devices] → [Device Setup] → [Steinberg UR28M] → [Control Panel] → [Open Config App]

Panel Controls

(Device name) Window
This is the window for selecting the sample rate or word clock source of the device.

1 Sample Rate (Windows only)
Selects the sample rate of the device.
Option: 44.1 kHz, 48 kHz, 88.2 kHz, 96 kHz

NOTE
For Mac, select the sample rate of the device via the Audio MIDI Setup.

2 Clock Source (Windows only)
Selects the word clock source of the device.

<table>
<thead>
<tr>
<th>Option</th>
<th>Clock Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>S/PDIF</td>
<td>The word clock signal input to S/PDIF IN.</td>
</tr>
<tr>
<td>Internal</td>
<td>The internal word clock signal.</td>
</tr>
</tbody>
</table>

NOTE
For Mac, select the word clock source of the device via the Audio MIDI Setup.

3 Enable Power Management
Select enable (checkmark) and disable (no checkmark) for automatic power off.

The device is equipped with an automatic power off function. When this function is enabled, the power of the device will turn off automatically (after thirty minutes) when one of the following actions is performed. The power button will flash during the thirty-minute interval.
- Turning off the computer.
- Disconnecting the USB cable between the device and the computer.
ASIO Window (Windows only)
This is the window for selecting the ASIO driver settings.

1 Device
Selects the device that will be using the ASIO driver. This function is available when connecting to the computer two or more devices compatible with the Yamaha Steinberg USB Driver.

2 Buffer Size
Selects the buffer size (page 33) for the ASIO driver. The range varies depending on the sample rate.

<table>
<thead>
<tr>
<th>Sample Rate</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>48 kHz or lower</td>
<td>64 samples – 2048 samples</td>
</tr>
<tr>
<td>88.2 kHz or higher</td>
<td>128 samples – 4096 samples</td>
</tr>
</tbody>
</table>

NOTE
For Mac, select the buffer size in the buffer size selecting window, which is opened from an application such as DAW software.

3 Input Latency/Output Latency
Indicates the delay time for the audio input and output in millisecond units.

Audio latency varies depending on the value of the ASIO buffer size. The lower the value of the ASIO buffer size, the lower the value of Audio latency.

About Window
This window indicates information about the audio driver.

1 About
Indicates the version and copyright of the audio driver. The letters “x.x.x” indicate the version number.

dspMixFx UR28M
This is the window for configuring the DSP mixer and DSP effect equipped with the device. The signals flow top-to-down and left-to-right. The dspMixFx UR28M provides stand-alone operation.

NOTE
You cannot operate the dspMixFx UR28M while a Cubase series DAW is running. When Cubase is running, configure the DSP mixer and DSP effect from “Dedicated Windows for Cubase Series” (page 17).
How to Open the Window

Windows

[All Programs] or [All apps] → [Steinberg UR28M] → [dspMixFx UR28M]

Mac

[Applications] → [dspMixFx UR28M]

Panel Controls

Tool Area

This is the area for configuring the common settings of the dspMixFx UR28M.

- **Quit**
  Quits the dspMixFx UR28M.

- **Minimize**
  Minimizes the dspMixFx UR28M window.

- **Menu**
  Provides four menus, including Save the settings file of the dspMixFx UR28M (page 33) and Import Scene (page 33).

<table>
<thead>
<tr>
<th>Menu</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Opens the settings file of the dspMixFx UR28M.</td>
</tr>
<tr>
<td>Save</td>
<td>Saves the settings file of the dspMixFx UR28M to a computer.</td>
</tr>
<tr>
<td>Import Scene</td>
<td>Imports a scene from the settings file of the dspMixFx UR28M. Select the settings file of the dspMixFx UR28M and import scene on the left side of the IMPORT SCENE window. Select the destination for importing on the right side of the window. Click [OK] to import it.</td>
</tr>
<tr>
<td>Initialize All Scenes</td>
<td>Deletes all the saved scenes.</td>
</tr>
</tbody>
</table>

- **Scene**
  Indicates the scene name. You can change the scene name by clicking on it.

  When you click the button on the right side, the window for calling up the scene will open. You can call up the scene by clicking it. To cancel calling up the scene, click outside of the window.

- **STORE**
  Opens the scene store window. Enter the desired scene name into the STORE NAME field. Select the destination for storing the scene in the No. NAME field. Click [OK] to store the scene.

- **Selecting the window**
  Selects the dspMixFx UR28M window. The selected window icon will light in red.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Main window (page 13)</td>
</tr>
<tr>
<td></td>
<td>Setup window (page 16)</td>
</tr>
<tr>
<td></td>
<td>Information window (page 17)</td>
</tr>
</tbody>
</table>

- **Help**
  Opens the Operation Manual (this manual).
Main Window
This is the window for configuring the entire signal flow.

Channel Area
This is the area for configuring the input channel settings.

Channel Area (page 13) MIX Area (page 15)

Channel Area

Channel Link
Turns on (lit) and off (dark) the channel link of two adjacent channels. When you turn this on, two mono channels will become one stereo channel.

Level Meter
Indicates the signal level.

High Pass Filter
Turns on (lit) and off (dark) the high pass filter.

To select the cutoff frequency of the high pass filter, use the “Setup Window” (page 16) in the section “dspMixFx UR28M.”

Phase
Turns on (lit) and off (dark) the phase inversion of the signal.
**Effect Insertion Location**
Selects the insertion location of an effect.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MON.FX</td>
<td>Applies an effect to only the monitor signal (sent to the device).</td>
</tr>
<tr>
<td>INS.FX</td>
<td>Applies an effect to both the monitor signal (sent to the device) and the recording signal (sent to the DAW software).</td>
</tr>
</tbody>
</table>

**Effect On/Off**
Turns the effect on (lit) and off (dark).

**Effect Edit**
Opens (lit) and closes (dark) the selected effect setup window.

**Effect Type**
Selects the effect. The maximum number of Channel Strip and Guitar Amp Classics iterations which can be used simultaneously has restrictions. Refer to the “Limitations on the use of effects” (page 36).

**REV-X Send**
Adjusts the signal level which is sent to the REV-X.

*Range:* $-\infty \text{ dB} – +6.00 \text{ dB}$

**Pan**
Adjusts the pan.

*Range:* L16 – C – R16

**Mute**
Turns the mute on (lit) and off (dark).

**Solo**
Turns the solo on (lit) and off (dark).

**+48V**
Indicates the on/off status of the phantom power function of the device.

**Fader**
Adjusts the signal level.

*Range:* $-\infty \text{ dB} – +6.00 \text{ dB}$

**DAW Area**
This is the area for configuring the DAW channel settings.

1. **Level Meter**
   Indicates the signal level.

2. **Pan**
   Adjusts the pan.

*Range:* L16 – C – R16

3. **Mute**
   Turns the mute on (lit) and off (dark).

4. **Solo**
   Turns the solo on (lit) and off (dark).

5. **Fader**
   Adjusts the signal level.

*Range:* $-\infty \text{ dB} – +6.00 \text{ dB}$
Panel Controls for the Software Programs

Master Area
This is the area for configuring the master channel settings.

- **Level Meter**
  Indicates the signal level.

- **REV-X Send On/Off**
  Turns the REV-X on (lit) and off (dark).

  You can turn this on for one of MIX 1–3.

- **REV-X Edit**
  Opens (lit) and closes (dark) the “REV-X” (page 24) setup window.

- **REV-X Type**
  Selects the REV-X type.
  **Option:** Hall, Room, Plate

- **REV-X Time**
  Adjusts the reverb time of the REV-X. This parameter links to Room Size. The adjustable range varies depending on the REV-X type.

  **REV-X type** | **Range**
  --- | ---
  Hall | 0.103 sec – 31.0 sec
  Room | 0.152 sec – 45.3 sec
  Plate | 0.176 sec – 52.0 sec

- **REV-X Return Level**
  Adjusts the return level of the REV-X.
  **Range:** $\infty$ dB – +6.00 dB

- **Pan**
  Adjusts the pan.
  **Range:** L16 – C – R16

- **Mute**
  Turns the mute on (lit) and off (dark).

- **Fader**
  Adjusts the signal level.
  **Range:** $\infty$ dB – +6.00 dB

MIX Area
This is the area for selecting the MIX you want to configure.

- **MIX**
  Selects the MIX you want to configure.

  You can copy the Main window settings of the MIX by dragging and dropping.

Headphone Area
This is the area for selecting the output signal of the headphone. (PHONES 2 only)

- **PHONES On/Off**
  Turns on (lit) and off (dark) the headphone. You can output the MIX selected in the MIX area to the PHONES by turning this on.
Setup Window
This is the window for configuring the common settings of the device.

1 CONTROL PANEL
For Windows, this opens the “Control Panel of the Audio Driver” (page 10). For Mac, this opens the Audio MIDI Setup.

2 INPUT 3/4 LEVEL
Selects the input signal level of LINE INPUT 3/4.
Option: +4dBu, -10dBV

3 HPF
Selects the cutoff frequency of the high pass filter.
Option: 120 Hz, 100 Hz, 80 Hz, 60 Hz, 40 Hz

4 INPUT METER SETTING
Selects the analog input jacks whose input signal levels are indicated on the INPUT meter on the device.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>INPUT 1-2</td>
<td>Indicates the input signals of MIC/LINE/Hi-Z 1/2.</td>
</tr>
<tr>
<td>INPUT 3-4</td>
<td>Indicates the input signals of LINE INPUT 3/4.</td>
</tr>
</tbody>
</table>

5 S/PDIF OUT
Selects the output signal of the S/PDIF OUT.

6 OUTPUT (A/B/C) MODE SELECT
Selects the function (mode) of the LINE OUTPUT A–C.
There are two modes, Alternate and Independent.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alternate</td>
<td>One of the LINE OUTPUTS A–C selected by the OUTPUT buttons A–C outputs a single MIX signal selected by the SOURCE SELECT button.</td>
</tr>
<tr>
<td>Independent</td>

2 LOOPBACK
Turns the Loopback function on (lit) and off (dark). When the Loopback function is set to ON, the audio signals output from MIX 1 in the DSP mixer (dspMix FX) in the device are returned to the computer for actual broadcasting. Refer to the section “Signal Flow” (page 35). When using multi-track recording in audio recording software, set the Loopback function to OFF.

Information Window
This window indicates information about the dspMixFx UR28M and the device.

3 Version Information
Indicates the version of the firmware and software. The letters “x.x.x” and “x.xx” indicate the version number.

4 Check for update
Checks whether or not you have the latest software and firmware version, via the Internet. If a new version is found, follow the on-screen instructions for updating.

Dedicated Windows for Cubase Series
These are the windows for configuring the device settings from Cubase series. The Dedicated Windows for Cubase series allow you to configure the parameters which are configured by the dspMixFx UR28M. from Cubase series. Two types of windows are available: Input Settings and Hardware Setup.

Input Settings Window
This is the window for configuring the input settings of the device. The signal flow is from top to bottom. The settings on this window are saved to the Cubase project file, except for the +48V indicator.

Hardware Setup Window
This is the window for configuring the general settings of the device. Click the upper tabs to select the window. Only the settings on the Reverb Routing window are saved to the Cubase project file.

Screenshot
Input Settings Window
Hardware Setup Window

How to Open the Window
The Input Settings window appears in the Mixer window

1. [Devices] → [MixConsole] to open the Mixer window.

2. Click [Racks] to open the rack selector.

   The rack selector appears.

3. Click ○ next to the [Hardware] to show [HARDWARE] in the Mixer window.

4. Click [HARDWARE].

   The Input Settings window appears in the Mixer window as shown below.
Panel Controls

Input Settings Window

1. **+48V**
   Indicates the on/off status of the phantom power function of the device.

2. **Phase**
   Turns on (lit) and off (dark) the phase inversion of the signal.

3. **High Pass Filter**
   Turns on (lit) and off (dark) the high pass filter.

   To select the cutoff frequency of the high pass filter, use the “Settings Window” (page 21) in the section “Dedicated Windows for Cubase Series.”

4. **Effect Edit**
   Opens the selected effect setup window.

5. **Effect Type**
   Selects the effect. The maximum number of Channel Strip and Guitar Amp Classics iterations which can be used simultaneously has restrictions. Refer to the “Limitations on the use of effects” (page 36).

6. **Drive / Output Level**
   When Channel Strip is selected, this adjusts the degree to which the compressor is applied. The higher the value, the greater the effect.
   **Range:** 0.00 – 10.00
   When Guitar Amp Classics is selected, this adjusts the output level.
   **Range:** 0.00 – 1.00

7. **Morph**
   Adjusts the Channel Strip Sweet Spot Data. (Refer to the “Morph” in the section “Channel Strip” on page 22.)

   When Guitar Amp Classics is selected, Morph is not displayed.

8. **Effect Insertion Location**
   Selects the insertion location of an effect.

<table>
<thead>
<tr>
<th>Insertion location</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper (OFF)</td>
<td>Turns the effect off.</td>
</tr>
<tr>
<td>Middle (MON.FX)</td>
<td>Applies an effect Strip to only the monitor signal (sent to the device).</td>
</tr>
<tr>
<td>Lower (INS.FX)</td>
<td>Applies an effect Strip to both the monitor signal (sent to the device) and the recording signal (sent to the DAW software).</td>
</tr>
</tbody>
</table>

   Indicates the position from which the audio signals for monitoring will be output when turning on Direct Monitoring in the device settings on Cubase.

10. **REV-X Edit**
    Opens the “REV-X” (page 24) setup window.

11. **REV-X Send**
    Adjusts the signal level which is sent to the REV-X.
    **Range:** $\infty$ dB – +6.00 dB

12. **Headphones Edit**
    Opens the “Headphones Window” (page 20) in the section “Dedicated Windows for Cubase Series.”

13. **Reverb Routing Edit**
    Opens the “Reverb Routing Window” (page 20) in the section “Dedicated Windows for Cubase Series.”
Hardware Setup Window

How to Open the Window
[Devices] ➔ [Audio Hardware Setup]

Headphones Window
This is the window for selecting the output signal of the PHONES on the device. (PHONES 2 only)

Phones 1
Indicates the output signal of PHONES 1.

Phones 2
Selects the output signal of PHONES 2.

Reverb Routing Window
This is the window for configuring the “REV-X” (page 24) settings.

REV-X Send Source Select
Selects the send source signal which is sent to the REV-X. You can select one signal at a time. The checkmark will be on the selected signal.

REV-X Return Signals
Selects the signal for which the return level is adjusted.

REV-X Return Level
Indicates the return level of the REV-X.

REV-X Return Level knob
Adjusts the return level of the selected (highlighted) signal.
Range: -∞ dB – +6.00 dB

Output Routing Window
This is the window for selecting the output signal of the output jacks on the device.

S/PDIF OUT
Selects the output signal of the S/PDIF OUT.

REV-X type Range

<table>
<thead>
<tr>
<th>REV-X type</th>
<th>Range</th>

</tr>
</tbody>
</table>
**Master Levels Window**
This is the window for configuring the master level of the output jacks on the device.

**OUTPUT (A/B/C) MODE SELECT**
Selects the function (mode) of the LINE OUTPUT A–C.
There are two modes, Alternate and Independent.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alternate</td>
<td>One of the LINE OUTPUTS A–C selected by the OUTPUT buttons A–C outputs a single MIX signal selected by the SOURCE SELECT button.</td>
</tr>
<tr>
<td>Independent</td>
<td>The LINE OUTPUTS A–C output each MIX selected by the SOURCE SELECT button at the same time.</td>
</tr>
</tbody>
</table>

**Master Source**
Indicates the LINE OUTPUT.

**Master Level**
Indicates the output signal level of the LINE OUTPUT.

**LINK (Independent mode only)**
Lets you enable (checkmark) or disable (no checkmark) the function which adjusts the level of all LINE OUTPUT signals by the OUTPUT LEVEL knob on the device at the same time.

For instructions on how to adjust the output signal level with LINK disabled, refer to the “OUTPUT LEVEL knob” (page 9) in the section “Panel Controls and Terminals (Details).”

**Settings Window**
This is the window for configuring the device settings.

**INPUT 3/4 LEVEL**
Selects the input signal level of LINE INPUT 3/4.
Option: +4dBu, -10dBV

**HPF**
Selects the cutoff frequency of the high pass filter.
Option: 120 Hz, 100 Hz, 80 Hz, 60 Hz, 40 Hz

**Input Meter Setting**
Selects the analog input jacks whose input signal levels are indicated on the INPUT meter on the device.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>INPUT 1-2</td>
<td>Indicates the input signals of MIC/LINE/HI-Z 1/2.</td>

</tr>
</tbody>
</table>

**LOOPBACK**
Turns the Loopback function on (lit) and off (dark). Refer to the “LOOPBACK” in the section “dspMixFx UR28M” (page 17).
Sweet Spot Morphing Channel Strip (Channel Strip)

Overview
The Sweet Spot Morphing Channel Strip (“Channel Strip” for short) is a multi-effect that combines compression and EQ. Advanced sound engineering know-how is condensed into a number of convenient presets that can be simply and instantly recalled, for professional results.

Four channel strips can be used at a time, and it can be assigned either to the monitor sound only, or to both the monitor and recorded sound.

The Channel Strip equipped with the device and the Channel Strip of the VST Plug-in version have the same parameters. When using the Channel Strip on Cubase series programs, you can share the settings between the built-in Channel Strip and the Channel Strip of the VST Plug-in version as a preset file.

When using the built-in Channel Strip on Cubase series programs, turn on the “Direct Monitoring” setting in the program. Also, when assigning the Channel Strip of the VST Plug-in version to the effect slot on Cubase series programs, select it from the “Dynamics” category (in the case of the default settings).

How to Open the Window
From Dedicated Windows for Cubase Series
Select the “Channel Strip” from the “Effect Type”, then click “Channel Strip Edit” in the section “Input Settings Window” (page 17).

From the dspMixFx UR28M
Select the “Channel Strip” from the “Effect Type”, then click “Channel Strip Edit” in the section “Channel Area” (page 13).

Panel Controls

Common to Compressor and Equalizer

1. **MORPH**
   Adjusts the parameter of the Sweet Spot Data.
   You can simultaneously adjust the compressor and equalizer settings which are set to five points around this knob by turning this knob. When you set the knob to the middle of adjacent two points, the compressor and equalizer settings will be set to an intermediate value.

2. **Sweet Spot Data**
   Selects the Sweet Spot Data (page 33).

3. **TOTAL GAIN**
   Adjusts the total gain of the Channel Strip.
   Range: -18.0 dB – +18.0 dB

4. **Level Meter**
   Indicates the output level of the Channel Strip.

Compressor

- 1. ATTACK
- 2. RELEASE
- 3. RATIO
- 4. KNEE
- 5. METER
- 6. SIDEBAND
- 7. FREQUENCY
- 8. DRIVE
**ATTACK**
Adjusts the attack time of the compressor.
Range: 0.092 msec – 80.00 msec

**RELEASE**
Adjusts the release time of the compressor.
Range: 9.3 msec – 999.0 msec

**RATIO**
Adjusts the ratio of the compressor.
Range: 1.00 – ∞

**KNEE**
Selects the knee type of the compressor.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SOFT</td>
<td>Produces the most gradual change.</td>
</tr>
<tr>
<td>MEDIUM</td>
<td>Middle setting between SOFT and HARD.</td>
</tr>
<tr>
<td>HARD</td>
<td>Produces the sharpest change.</td>
</tr>
</tbody>
</table>

**SIDE CHAIN Q**
Adjusts the band width of the side chain filter (page 33).
Range: 0.50 – 16.00

**SIDE CHAIN F**
Adjusts the center frequency of the side chain filter.
Range: 20.0 Hz – 20.0 kHz

**SIDE CHAIN G**
Adjusts the gain of the side chain filter.
Range: -18.0 dB – +18.0 dB

**COMPRESSOR On/Off**
Turns the compressor on (lit) and off (dark).

**Compressor Curve**
This graph indicates the approximate compressor response. The vertical axis indicates the output signal level, and the horizontal axis indicates the input signal level.

**Gain Reduction Meter**
Indicates the gain reduction.

**DRIVE**
Adjusts the degree to which the compressor is applied. The higher the value, the greater the effect.
Range: 0.00 – 10.00

---

**Equalizer Curve**
This graph indicates the characteristics of the 3-band equalizer. The vertical axis indicates the gain, and the horizontal axis indicates the frequency. You can adjust LOW, MID, and HIGH by dragging each handle in the graph.

**LOW F**
Adjusts the center frequency of the low band.
Range: 20.0 Hz – 1.00 kHz

**LOW G**
Adjusts the gain of the low band.
Range: -18.0 dB – +18.0 dB

**MID Q**
Adjusts the band width of the middle band.
Range: 0.50 – 16.00

**MID F**
Adjusts the center frequency of the middle band.
Range: 20.0 Hz – 20.0 kHz

**MID G**
Adjusts the gain of the middle band.
Range: -18.0 dB – +18.0 dB

**HIGH F**
Adjusts the center frequency of the high band.
Range: 500.0 Hz – 20.0 kHz

**HIGH G**
Adjusts the gain of the high band.
Range: -18.0 dB – +18.0 dB

**EQUALIZER On/Off**
Turns the equalizer on (lit) and off (dark).
REV-X

Overview
REV-X is a digital reverb platform developed by Yamaha for pro audio applications. One REV-X effect is included in this unit. Input signals can be sent to the REV-X effect, and the REV-X effect is applied only to the monitor outputs. Three types of REV-X are available: Hall, Room, and Plate.

The hardware REV-X equipped with the device and REV-X of the VST Plug-in version have essentially the same parameters. However, the [OUTPUT] and [MIX] parameters are only available in the VST Plugin version. When using REV-X on Cubase series programs, you can share the settings between the built-in REV-X and REV-X of the VST Plug-in version as a preset file. When using the built-in REV-X on Cubase series programs, turn on the “Direct Monitoring” setting in the program. Also, when assigning REV-X of the VST Plug-in version to the effect slot on Cubase series programs, select it from the “Reverb” category (in the case of the default settings).

The built-in REV-X is equipped with an “FX Bus” which is used for sending the signal from DAW software to REV-X. For example, to send the recorded audio data to REV-X, you can check the sound with REV-X, which is used for monitoring during the recording.

How to Open the Window

From Dedicated Windows for Cubase Series
• Click “REV-X Edit” (page 19) in the section “Input Settings Window.”
• Click “REV-X Edit” (page 19) in the section “Reverb Routing Window.”

From the dspMixFx UR28M
Click “REV-X Edit” (page 15) in the section “Master Area.”

Panel Controls

NOTE
This section uses the Hall type of REV-X as an example.

1 Reverb Time
Adjusts the reverb time. This parameter links to Room Size. The adjustable range varies depending on the REV-X type.

| REV-X type Range | Hall 0.103 sec – 31.0 sec | Room 0.152 sec – 45.3 sec | Plate 0.176 sec – 52.0 sec |

2 Initial Delay
Adjusts the time that elapses between the direct, original sound and the initial reflections that follow it.
Range: 0.1 msec – 200.0 msec

3 Decay
Adjusts the characteristic of the envelope from the moment the reverberation starts to the moment it attenuates and stops.
Range: 0 – 63

4 Room Size
Adjusts the size of the simulated room. This parameter links to Reverb Time.
Range: 0 – 31
**Diffusion**  
Adjusts the spread of the reverberation.  
**Range:** 0 – 10

**HPF**  
Adjusts the cutoff frequency of the high pass filter.  
**Range:** 20 Hz – 8.0 kHz

**LPF**  
Adjusts the cutoff frequency of the low pass filter.  
**Range:** 1.0 kHz – 20.0 kHz

**Hi Ratio**  
Adjusts the duration of reverberation in the high frequency range by using a ratio relative to the Reverb Time. When you set this parameter to 1, the actual specified Reverb Time is fully applied to the sound. The lower the value, the shorter the duration of reverberation in the high frequency range.  
**Range:** 0.1 – 1.0

**Low Ratio**  
Adjusts the duration of reverberation in the low frequency range by using a ratio relative to the Reverb Time. When you set this parameter to 1, the actual specified Reverb Time is fully applied to the sound. The lower the value, the shorter the duration of reverberation in the low frequency range.  
**Range:** 0.1 – 1.4

**Low Freq**  
Adjusts the frequency of the Low Ratio.  
**Range:** 22.0 Hz – 18.0 kHz

**OPEN/CLOSE**  
Opens and closes the window which adjusts the reverb settings.

**Graph**  
Indicates the characteristics of reverberation. The vertical axis indicates the signal level, the horizontal axis indicates the time, and the Z-axis indicates the frequency. You can adjust the characteristics of reverberation by dragging the handles in the graph.

**OUTPUT (VST Plug-in version only)**  
Indicates the output level of the REV-X.

**MIX (VST Plug-in version only)**  
Adjusts the output level balance between the original sound and effect sound.  
**Range:** 0% – 100%

**Time Axis Setting**  
Select the display range of the time (horizontal axis) on the graph.  
**Display range:** 500 msec – 50 sec

**Zoom Out**  
Zooms out the display range of the time (horizontal axis) on the graph.

**Zoom In**  
Zooms in the display range of the time (horizontal axis) on the graph.

**TIPS**  
- You can reset some parameters to the default value by holding the [Ctrl]/[command] key while you click on the knobs, sliders, and faders.  
- You can adjust the parameters more finely by holding the [SHIFT] key while you drag on the knobs, sliders, and faders.
Guitar Amp Classics

Overview

Guitar Amp Classics are guitar amp effects that make extensive use of advanced Yamaha modeling technology. Four amp types with different sonic characteristics are provided.

The maximum number of Channel Strip and Guitar Amp Classics iterations which can be used simultaneously has restrictions. Refer to the “Limitations on the use of effects” (page 36).

How to Open the Window

From Dedicated Windows for Cubase Series
Select the “Guitar Amp Classics” from the “Effect Type”, then click “Channel Strip Edit” in the section “Input Settings Window” (page 19).

From the dspMixFx UR28M
Select the “Guitar Amp Classics” from the “Effect Type”, then click “Channel Strip Edit” in the section “Channel Area” (page 13).

Controls and Functions

CLEAN

This amp type is optimized for clean tones, effectively simulating the tight brilliance of transistor amplifiers. The tonal character of this amp model provides an ideal platform for recording with multi-effects. It also features built-in chorus and vibrato effects.

1 VOLUME
Adjusts the amplifier’s input level.

2 DISTORTION
Adjusts the depth of distortion produced.

3 TREBLE/MIDDLE/BASS
These three controls adjusts the amplifier’s tonal response in the high, middle, and low frequency ranges.

4 PRESENCE
Can be adjusted to emphasize the high frequencies and overtones.

5 Cho/OFF/Vib
Turns the Chorus or Vibrato effect on or off. Set to [Cho] to turn the Chorus effect on, or to [Vib] to turn the Vibrato effect on.

6 SPEED/DEPTH
These controls adjust the speed and depth of the Vibrato effect when it is on.

7 BLEND
Adjusts the balance between the direct and effect sound.

8 OUTPUT
Adjusts the final output level.

CRUNCH

This is the amp type to use when you want lightly overdriven crunch tones. The CRUNCH model simulates the type of vintage tube amplifiers that are favored for blues, rock, soul, R&B, and similar styles.

1 Normal/Bright
Selects a normal or bright tonal character. The [Bright] setting emphasizes the high-frequency overtones.

2 GAIN
Adjusts the input level applied to the preamp stage. Rotate clockwise to increase the amount of overdrive produced.

3 TREBLE/MIDDLE/BASS
These three controls adjusts the amplifier’s tonal response in the high, middle, and low frequency ranges.

4 PRESENCE
Can be adjusted to emphasize the high frequencies and overtones.

5 OUTPUT
Adjusts the final output level.
The DRIVE amp type provides a selection of distortion sounds that simulate the tonal character or several high-gain tube amplifiers. From mildly overdriven crunch to heavy distortion suitable for hard rock, heavy metal, or hardcore styles, this model offers a wide range of sonic capabilities.

**AMP TYPE**

Six amplifier types are provided. Types 1 and 2 feature relatively mild distortion that allows picking nuances to come through naturally. Types 3 and 4 have more pronounced overtones, resulting in a fat, soft tone. Types 5 and 6 deliver wild, aggressive distortion with a tight attack. The even-numbered amp types have greater presence and range than the odd-numbered types.

**GAIN**

Adjusts the input level applied to the preamp stage. Rotate clockwise to increase the amount of distortion produced.

**MASTER**

Adjusts the output level from the preamp stage.

**TREBLE/MIDDLE/BASS**

These three controls adjusts the amplifier’s tonal response in the high, middle, and low frequency ranges.

**PRESENCE**

Can be adjusted to emphasize the high frequencies and overtones.

**OUTPUT**

Adjusts the final output level.

The LEAD amp type simulates a high-gain tube amp that is rich in overtones. It is ideally suited to playing lead guitar lines that will project well in an ensemble, but it can also be set up for crisp accompaniment tones as well.

**High/Low**

Selects the amp output type. The [High] setting simulates a high-output amp, and allows the creation of more distorted tones.

**GAIN**

Adjusts the input level applied to the preamp stage. Rotate clockwise to increase the amount of distortion produced.

**MASTER**

Adjusts the output level from the preamp stage.

**TREBLE/MIDDLE/BASS**

These three controls adjusts the amplifier’s tonal response in the high, middle, and low frequency ranges.

**PRESENCE**

Can be adjusted to emphasize the high frequencies and overtones.

**OUTPUT**

Adjusts the final output level.

**HINT**

Using the GAIN, MASTER, and OUTPUT Controls

The tonal character of the DRIVE and LEAD amp types can be adjusted over a wide range via the GAIN, MASTER, and OUTPUT controls. GAIN adjusts the level of the signal applied to the preamp stage, affecting the amount of distortion produced. MASTER adjusts the output level from the preamp stage that is then fed to power amp stage. The GAIN and MASTER control settings have a large effect on the final sound, and the MASTER control may need to be turned up fairly high in order to drive the power stage sufficiently for optimum tone. The OUTPUT control adjusts the final output level from the amp model without affecting the distortion or tone, and is useful for adjusting the guitar’s volume without changing any other aspects of the sound.
Usage Examples

Introduction
This section introduces some usage examples of the device. It is assumed that the audio driver settings on the DAW software have been properly configured according to the “Basic Operation” section in the Getting Started manual. If you have not configured them yet, refer to the section “Basic Operation” to complete the configuration.

Recording with the Channel Strip and REV-X
This section shows how to record a vocal to DAW software using the built-in Channel Strip and REV-X on the device. When using Cubase series programs, it is handy to use the project template. These project templates include the settings of the Channel Strip and REV-X. You can start recording instantly by opening the project template. When using programs other than the Cubase series, use the dspMixFx UR28M.

Operation

Cubase Series Programs
1. Launch the Cubase series DAW. The Project Assistant window appears.
2. Select the project template “Steinberg UR28M Vocal-Inst Recording 1” in “Recording” on the Project Assistant window, then click [Create]. When using Cubase 7, select “Steinberg UR28M Vocal-Inst Recording 1-C7.” The “C7” designation in project template name indicates the template is for Cubase 7 or later.
3. Turn on Direct Monitoring as follows. [Devices] → [Device Setup] → Yamaha Steinberg USB ASIO] (Windows) or [Steinberg UR28M] (Mac) → enter checkmark to “Direct Monitoring” → [OK]
4. Confirm that the "Record Enable" and “Monitor” indicators are turned on (lit) for the audio track.
5. While singing into the microphone, adjust the input signal level of the microphone by the INPUT GAIN knob on the device. Adjust the input signal level so that the red lamp in the INPUT meter does not light.
6. While singing into the microphone, adjust the output signal level of the headphones by the PHONES knob on the device.
7. Set the Channel Strip settings and REV-X settings on the Input Settings window. Select the Channel Strip Insertion Location depending on the desired insert point. The default setting is “Lower” (applied to both the monitor signal and the recording signal). For details on the Insertion Location, refer to the “Effect Insertion Location” (page 19) in the section “Dedicated Windows for Cubase Series.”

8. Click “Record” to start the recording.

9. After finishing the recording, click “Stop” to stop it.

10. Turn “Monitor” off (dark) for the audio track.

11. Click the Ruler to move the project cursor to the desired point for starting playback.

12. Click “Play” to check the recorded sound.

When listening to the sound over monitor speakers, adjust the output signal level by the OUTPUT LEVEL knob on the device.

Operation is now completed.

Programs Other Than Cubase Series

1. Launch your DAW software.

2. Open the dspMixFx UR28M.

   For instructions on how to open the dspMixFx UR28M, refer to the section “How to Open the Window” (page 12).

3. Adjust the input signal level of the microphone by the INPUT GAIN knob on the device.

   Adjust the input signal level so that the red lamp in the INPUT meter does not light.

4. Adjust the output signal level of the headphone by the PHONES knob on the device.

5. Set the Channel Strip settings and REV-X settings on the dspMixFx UR28M.

6. Start recording on your DAW software.

7. After finishing recording, stop it.

8. Playback the newly recorded sound to check it.

Operation is now completed.
Controlling the Monitor Sound

This section shows how to control the monitor sound by using the buttons and knobs on the device.

Connection Example

![Connection Diagram]

Operation

1. Play back some music with your DAW software or music player.
2. Control the monitor sound by using the following buttons and knobs.
   - OUTPUT button A–C
   - OUTPUT LEVEL knob
   - MUTE button
   - MONO MIX button
   - DIM button

   For details on the buttons and knobs, refer to the “Front Panel” (page 7) in the section “Panel Control and Terminals (Details)."

The procedures are now complete.

Using the Device Without a Computer

This section shows how to use the device without a computer, allowing you to use it as a standalone mixer or A/D - D/A converter. You can save the DSP mixer and DSP effect settings configured by the dspMixFx UR28M to the device. These settings are maintained even if you turn off the power of the device.

Connection Example

![Connection Diagram]

Procedures

1. Connect the device to a computer with a USB cable.
2. Turn on the device.
3. Open the dspMixFx UR28M.
   For instructions on opening the dspMixFx UR28M, refer to the “How to Open the Window” (page 12) in the section “dspMixFx UR28M.”
4. Configure the DSP mixer and DSP effect settings.
5. When you make the settings, click [X] on the upper left of the window to close the dspMixFx UR28M.
   The settings of the dspMixFx UR28M are saved to the device.

The operation is now complete.
Using the Device with an iPad

Introduction
This section covers basic instructions for operating with Cubasis (an iPad app sold by Apple).
For the latest Cubasis information, see the Steinberg web site below.
http://www.steinberg.net/

NOTE
iOS applications may not be supported in your area. Please check with your Yamaha dealer.

Connection Example

CAUTION
Make sure to set all volume levels to minimum before connecting or disconnecting the external device. Otherwise, high-volume output may damage your hearing or the equipment.

Recording/Playback

1. Turn on the device while holding down OUTPUT button C, and keep pressing the OUTPUT C button until an INPUT meter/OUTPUT meter flashes.
The UR28M enters Class Compliant mode for Apple iPad connectivity. While in the Class Compliant mode, the power button flashes several times by pressing the power button. To turn off the Class Compliant mode, turn on the power while holding down OUTPUT button C again.
2. Open Cubasis.
3. Double-tap the Project [Template].
4. Enter a project name and tap [OK] in the [New project] window.
5. Tap [+AUDIO] to add an AUDIO track.
6. Tap  on the far left of your screen to show the track menu, with [Audio input] at the top.
7. Tap 📦 to show the details window and set the input bus for the track by tapping a number.

8. Tap ✅ to turn monitoring on (lit).

9. Adjust the input signal level of the microphone with the [INPUT GAIN] knob on the device.
   To achieve optimum recording levels, increase the input level with the [INPUT GAIN] knob until the [PEAK] indicator lights in red, then slowly bring the level down until the indicator lights slightly when the input level is maximum.

10. While singing into the microphone, adjust the output signal level of the headphones by the [PHONES] knob on the device.

11. Tap ⌚ to start the recording.

12. Tap ⏰ to stop the recording.

13. Tap and slide on the ruler to move the playback position.
   You can also tap 🔴 to return to the beginning of the recording.

14. Tap ✦ to playback the recorded sound.

---

**dspMixFx for iPad**

From your iPad, you conveniently control built-in DSP mixer functions and DSP effects by using dspMixFx for iPad. For details on dspMixFx for iPad, see the Steinberg web site below.

Appendix

Glossary

MIX
MIX refers to the stereo output signals which flow in the device. The input signals to the device flow to each MIX. You can assign any MIX to any analog output jack or any digital output jack.

VST Plug-in
VST (Virtual Studio Technology) is a technology developed by Steinberg which allows the integration of virtual effect processors and instruments into your digital audio environment. VST Plug-ins are instrument- and effect-based software of VST format. When you install a VST Plug-in to your computer, it will work on any DAW software compatible with VST Plug-ins, such as Cubase series.

DAW (Digital Audio Workstation)
DAW is an integrative system of music production, which lets you record and edit digital audio data. DAW software programs are applications which allow you to build such comprehensive systems on a computer.

Word Clock
Word clock synchronizes the process timing of audio signals when transferring digital audio data between multiple devices. Normally, one device transmits a reference word clock signal, and the other devices receive this word clock signal and synchronize to it. If the word clock signal is not transferred correctly, click noise may occur or recording may not be successful, even if the sample rates of the various devices are set to the same value.

Buffer Size
Buffer size refers to the amount of memory used to temporarily hold data during playback and recording. It is recommended to adjust the buffer size depending on the situation. Normally, a higher buffer size reduces load to the computer CPU but produces latency (time lag). Smaller buffer sizes reduce latency but produce greater load to the computer CPU. This high load to the computer CPU may result in noise or the sound cutting off.

Scene
A Scene is stored data which maintains the settings on the Main window of dspMixFx UR28M. You can recall the stored Scene in dspMixFx UR28M, and up to 20 Scenes can be stored.

Settings file of the dspMixFx UR28M
The settings file of the dspMixFx UR28M is a data file including up to 20 scenes which can be saved to your computer. You can load the dspMixFx UR28M settings file to the dspMixFx UR28M.

Sweet Spot Data
Sweet Spot Data are preset settings data of the Sweet Spot Morphing Channel Strip created by top-class engineers. This data includes the settings for the compressor and equalizer which are saved to each five points around the MORPH knob.

Side Chain Filter
The side chain filter is a peaking filter which adjusts the frequency range to which the compressor is applied. It features Q (band width), F (center frequency), and G (gain) parameters. For example, if the compressor reduces the audio signal level excessively because only the specified frequency of the audio signal is at a high level (and other frequencies are lower), you can selectively lower the level of the specified frequency by using this peaking filter. This will prevent the compressor from excessive level reduction.

Specifications
Signal Flow

The following chart indicates the signal flow in the device.

**NOTE**

- The controllers on the device, such as the HI-Z switch, INPUT GAIN knob, and OUTPUT LEVEL knob, are not included in this chart.
- To configure each parameter, use the “dspMixFx UR28M” (page 11) or “Dedicated Windows for Cubase Series” (page 17).
*1 The following chart indicates an effect insertion location.

<table>
<thead>
<tr>
<th>Effect</th>
<th>To DAW input</th>
<th>To output on the device</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upper (INS.FX)</td>
<td>From input on the device</td>
<td></td>
</tr>
<tr>
<td>Lower (MON.FX)</td>
<td>From input on the device</td>
<td></td>
</tr>
<tr>
<td>Not applied (OFF)</td>
<td>From input on the device</td>
<td></td>
</tr>
</tbody>
</table>

*2 One of the MIX 1–3 signals can be sent to the REV-X.

*3 The built-in REV-X is equipped with an “FX Bus” which is used for sending the signal from DAW software to the REV-X. For example, to send the recorded audio data to the REV-X, you can check the sound with the REV-X, which is used for monitoring during the recording.

*4 To select the output signal for LINE OUTPUT A–C, use the buttons on the device. The following charts indicate the structures.

You can apply four Channel Strips to mono channels, or two Channel Strips to a stereo channel.

**Limitations on the use of effects**

The maximum number of Channel Strip and Guitar Amp Classics iterations which can be used simultaneously are limited to the following. For example, Channel Strip can be used for two mono channels, while Guitar Amp Classics can be used for one mono channel simultaneously.

<table>
<thead>
<tr>
<th>Channel Strip</th>
