Cubase 9

Version History

August 2017

Steinberg Media Technologies GmbH

Cubase 9.0.30

New video engine

Cubase Pro 9.0.30 includes a new video engine that is not based on Apple QuickTime technology and which supports various codecs on both Windows and macOS, as well as external video devices from Blackmagic Design.

More details on supported codecs can be found through the Steinberg Help Center at

https://helpcenter.steinberg.de

Improvements & issues resolved

The following list details resolved issues and improvements in this version.

ID #	Area	Issue
CAN-8988	Automation	Fixed an issue where MIDI Device Automation was not correctly chased and showing wrong parameter values after locating to different positions in the Project.
CAN-8820	Chords	Fixed an issue where Chord Symbols could be shown with a wrong enharmonic shift in Chord Pads and/or on Chord Track.
CAN-8666	Compatibility	Fixed an issue where MusicXML export with Japanese characters used the wrong encoding.
CAN-4817	Editing	Fixed an issue where Drum Maps were not correctly stored within projects when "Create Drum Map from Instrument" was used.
CAN-4818	Editing	Fixed an issue where Drum Maps could appear twice when loaded from file.
CAN-8797	Editing	Fixed an issue where MIDI Modifier parameters had no effect after activating a previously deactivated Instrument Track.
CAN-5960	Export	Fixed an issue where the recently used path list was always empty in the Export Audio Mixdown window.
CAN-4187	MixConsole	Fixed an issue where mouse clicks had no effect on various controls when mouse was moved while clicking.
CAN-6172	MixConsole	Fixed an issue where deactivated Insert FX plug-ins could not be activated again with ALT+Click.

CAN-7535	MixConsole	Fixed an issue where the last open Tabs were not correctly shown again when re-opening the MixConsole window.
CAN-9316	MixConsole	Fixed in issue where Bypass, Copy and Clear functions in the context menu of the Lower Zone MixConsole were not working.
CAN-1091	Performance	Fixed an issue where the Crosshair Cursor lagged behind when moving the mouse cursor.
CAN-7644	Performance	Fixed an issue where opening Inspector Sections was sluggish.
CAN-8821	Performance	Fixed an issue where the screen performance could decrease massively when a Chord Track with Chord Events was visible on screen.
CAN-7408	Plug-ins	Fixed an issue where some parameters values where not shown anymore in Prologue, Spector and Mystic.
CAN-4581	Sampler Track	Fixed an issue where the Pitch Coarse automation parameter could not be properly used as a continuous parameter.
CAN-7607	Score	Fixed an issue where printing scores could result in a truncated print.
CAN-4814	Stability	Fixed an issue where closing Cubase could exit the application when a Preset Browser was left open.
CAN-6329	Stability	Fixed an issue where exporting MusicXML files could exit the application.
CAN-7402	Stability	Fixed an issue where editing values in the Key Editor Info Line for a mutliple selection of open Parts to edit could exit the application.
CAN-8483	Stability	Fixed an issue where toggling between Symbols and Inspector Tab for the Lower Zone Score Editor could exit the application.
CAN-8608	Stability	Fixed multiple issues where opening the Score Editor could exit the application.
CAN-9754	Stability	Fixed an issue where using a key command for "Edit VST Instrument" while a non-VSTi channel was selected in the MixConsole could exit the application.

CAN-5984 **Transport** Fixed an issue where Time Format could not be changed if the Secondary Time Display in the Transport Zone was expanded .

Cubase 9.0.20

Improvements & issues resolved

The following list details resolved issues and improvements in this version.

ID #	Area	Issue
CAN-6011	AudioWarp	Fixed an issue where using AudioWarp could lead to audible artefacts.
CAN-6907	Chords	Fixed an issue where some chord symbols were shown with an incorrect enharmonic shift.
CAN-6908	Chords	Fixed an issue where some MIDI keys could not be assigned to Chord Pad remote keys.
CAN-5189	Compatibility	Fixed an issue where tuplets with rests were not correctly exported to MusicXML files.
CAN-5870	Compatibility	Fixed an issue where MIDI device panels could not be properly imported.
CAN-6265	Compatibility	Fixed an issue where MIDI program values were not exported properly in MusicXML files.
CAN-6386	Compatibility	Fixed an issue where exporting double-dotted notes via MusicXML was incorrect.
CAN-1038	Editing	Fixed an issue where editing folder parts were corrupted when moving tracks in a divided track list.
CAN-1294	Editing	Fixed an issue where the grid in the Drum Editor disappeared when disabling Snap.
CAN-3430	Editing	Fixed an issue where the selection disappeared after duplicating multiple folder parts.
CAN-5836	Editing	Fixed an issue where it was not possible to properly select tracks via the Project Logical Editor when using a divided track list.
CAN-6335	Editing	Fixed an issue where selecting controllers in the List Editor was not properly updated in the Key Editor.
CAN-6493	Editing	Added "Paste by Matching Track Name" to menu Edit > Functions.

CAN-6603	Editing	Fixed an issue where double-clicking a MIDI event in the editors could exit the application.
CAN-6609	Editing	Fixed an issue where invalid quantize preset settings could freeze the application.
CAN-7007	Editing	Fixed an issue where using "Recall Cycle Marker X" could exit the application.
CAN-6653	Hardware	Fixed an issue where direct monitoring used with Steinberg audio interfaces stopped for a short moment when the focus was switched back to the application.
CAN-6001	Import	Fixed an issue where Instrument and Sampler Tracks where set to "Not Connected" when imported via "Import Tracks from Project".
CAN-5611	Instrument Track	Fixed an issue where the MIDI Input setting was lost after duplicating a disabled Instrument Track.
CAN-5607	MediaBay	Fixed an issue where the status of the preview buttons were not remembered in the right zone.
CAN-6191	MIDI Plug-ins	Fixed multiple issues when using MIDI plug-ins with active "Record Output to Track".
CAN-3964	MixConsole	Improved the MixConsole channel zooming behavior to retain a steady channel width whenever possible.
CAN-4756	MixConsole	Fixed an issue where the width of columns in the MixConsole History tab was not stored properly.
CAN-5971	MixConsole	Fixed an issue where a wrong mouse cursor shape was visible when working in the MixConsole window.
CAN-6237	MixConsole	Fixed an issue where the reset of the meters did not reset the gain reduction indicator.
CAN-7161	Performance	Improved the screen redraw performance when moving the mouse over events in a scrolling Key Editor window.
CAN-7247	Performance	Improved the screen redraw performance when moving the mouse over events inside the Project window.
CAN-7831	Performance	Improved the screen redraw performance of the musical grid display.
CAN-7832	Performance	Improved the screen redraw performance in the Project window by reducing the amount of unneccessary redraws in multiple occasions.

CAN-7850	Performance	Improved the screen redraw performance by disabling "Show Event Details" in Preferences > Event Display > Folders.
CAN-6219	Plug-in Manager	Fixed an issue where the search string was reset when dragging a plug-in to a collection.
CAN-5835	Plug-ins	Fixed an issue where the visual confirmation of the listen mode in Frequency didn't correspond.
CAN-6083	Plug-ins	Fixed an issue in REVerence where the reverb parameter didn't correspond after save and re-load of a project.
CAN-6267	Plug-ins	Fixed an issue in REVerence where the wrong impulse response file was used of Offline Processing.
CAN-6510	Plug-ins	Added the possibility to disable a band in the Frequency plug-in.
CAN-6839	Plug-ins	Fixed an issue where using A/B comparison for Frequency set the focus always to Band 8.
CAN-7368	Plug-ins	Fixed an issue where moving Insert slots with RoomWorks SE in 5.1 surround setup could exit the application.
	Plug-ins	Added improvements for Frequency: Select a band by clicking within the parameter area of a band; enable/disable bands by double-click on the corresponding handle in the graphical display; improved visualisation of disabled bands; disabled bands remain editable; "Q" can be set by mousewheel over the corresponding handle of the graphical display.
CAN-3407	Render In-Place	Fixed an issue where muted events on lanes were rendered incorrectly.
CAN-2442	Sampler Track	Improved the drag and drop behavior of files from the MediaBay to the Sampler Control tab.
CAN-2852	Sampler Track	Added a context menu for automateable Sampler Control tab parameters (e.g. to assign QuickControl slots or show the automation lane).
CAN-2894	Sampler Track	Fixed an issue where the Sampler Control tab did not follow the appearance settings of the application.
CAN-2992	Sampler Track	Improved compatibility with AIFF files.
CAN-3025	Sampler Track	Fixed an issue where selecting a Sampler Track automation lane indicated to "Drop Audio Sample Here!".

CAN-4663	**Sampler Track**	Added function to "Transfer to New Instrument" to support Padshop Pro.
CAN-4766	**Sampler Track**	Fixed an issue where the Zoom In/Out key commands did not work in envelope pages.
CAN-4767	**Sampler Track**	Fixed an issue where the Zoom In/Out key commands did not work for the waveform display in the Sampler Control tab.
CAN-4910	**Sampler Track**	Fixed an issue where the Sampler Control tab sometimes did not appear upon first click.
CAN-5037	**Sampler Track**	Fixed an issue where the keyboard display continued to show pressed keys which were already released.
CAN-5494	**Sampler Track**	Fixed an issue where the root key indication was incorrect when loading a preset was cancelled.
CAN-6203	**Sampler Track**	Added AI Knob support for parameters in the Sampler Control tab.
CAN-6218	**Sampler Track**	Improved the drag and drop behavior of files from the Finder/Explorer to the Sampler Control tab.
CAN-6612	**Sampler Track**	Fixed an issue where the Sampler Control tab remained empty after dragging audio into it.
CAN-7893	**Sampler Track**	Fixed an issue where start/end of events were not considered correctly when "Create Sampler Track" was used from the Audio menu.
CAN-7051	**Score**	Fixed an issue where opening the Score Editor could exit the application.
CAN-7148	**Score**	Fixed an issue where printing a score as PDF could exit the application.
CAN-7538	**Score**	Fixed an issue where the acoustic feedback button was missing the Score Editor.
CAN-6257	**Tempo Detection**	Fixed an issue where using the Tempo Detection could exit the application.
CAN-6254	**Transport**	Fixed an issue where the punch point controls where not available in the Transport Zone.
CAN-6580	**Transport**	Fixed an issue where Pre/Post Roll controls were not available in the Transport Zone.

Cubase 9.0.10

Improvements & issues resolved

The following list details resolved issues and improvements in this version.

ID #	Area	Issue
CAN-4928	Chord Track	Fixed an issue where dragging Chord Event across a Divided Track List resulted in a misaligned event.
CAN-4940	Chord Track	Fixed an issue where "Follow Chord Track" was not working correctly.
CAN-5748	Chord Track	Fixed an issue regarding wrong note colors when using "Chord Track" for event colors.
CAN-5902	Editing	Fixed an issue where the Quantize Panel did not correctly display the Crossfade section for multi-track usage (via Folder Group Editing).
CAN-4871	Input Transformer	Fixed an issue where certain setups of the Input Transformer could exit the application.
CAN-5408	Inspector	Fixed an issue where pinned Inspector sections were all closed after loading a project.
CAN-5616	Logical Editor	Fixed a potential exit issue.
CAN-5747	Logical Editor	Fixed an issue where Filter Target "Note is equal to" was stuck on "C".
CAN-4984	MediaBay	Fixed an issue where using the Search field on the MediaBay could exit the application.
CAN-5722	MIDI Editors	Fixed an issue where Show/Hide Controller Lanes did not work when Lanes were removed manually beforehand.
CAN-5766	MIDI Editors	Fixed an issue where resizing the Controller Lane area within the Inplace Editor could exit the application.
CAN-5873	MIDI Editors	Fixed an issue where note names where displayed with inconsistent enharmonics (e.g. Bb instead of A#).
CAN-5864	MIDI Plug-ins	Fixed an issue where MicroTuner settings were not applied after reloading a project.

ID #	Area	Issue
CAN-5188	MusicXML Export	Improved the compatibility of the number attribute for slurs (for import into Dorico).
CAN-5425	MusicXML Export	Improved the compatibility in regard to the encoding of tuplets (for import into Dorico).
CAN-5421	Performance	Fixed a performance issue when "Auto Select under Cursor" options was activated.
CAN-5724	Plug-ins	Fixed an issue where VST 3 plug-ins with special characters could not be used.
CAN-5771	Plug-ins	Fixed an issue where StudioEQ presets were missing in Cubase Elements.
CAN-5876	Plug-ins	Fixed an issue where panning could be wrong with REVerence.
CAN-5879	Plug-ins	Fixed an issue where side split LP/HP bands did not properly change type in Frequency.
CAN-5898	Plug-ins	Fixed an issue where the Maximizer output level was not consistent with the readings from the MixConsole metering.
CAN-4270	Project Window	Fixed an issue where "Open in separate Window" in MIDI Editors was not possible after working in the Controller Lane area.
CAN-5900	Project Window	Fixed an issue where the Overview Line was missing in Cubase LE, AI and Elements.
CAN-5946	Project Window	Fixed an issue where new recorded MIDI Parts were not displayed in open Editor tab in the Lower Zone.
CAN-5405	Remotes	Fixed an issue where remote control devices (e.g. NI Komplete Kontrol) could not follow the parameter mapping correctly while navigating through the track list.
CAN-3020	Sampler Track	Fixed an issue where Sample Start/End markers were not correctly set after dragging a resized audio event into the Sampler Control tab.
CAN-5112	Sampler Track	Fixed an issue where re-opening the Sampler Control tab showed no content.
CAN-5469	Sampler Track	Fixed an issue where the root key color indication on the keyboard display was incorrect.

ID #	Area	Issue
CAN-5513	**Sampler Track**	Fixed an issue where "Remove unused Media" in the Pool was not working correctly for audio files referenced by the Sampler Track.
CAN-5678	**Sampler Track**	Fixed and issue where no content was displayed in a Sampler Control tab after re-opening the Lower Zone.
CAN-5749	**Sampler Track**	Fixed an issue where creating a sampler track from an MP3 file in the MediaBay exited the application.
CAN-4033	**Steinberg Hardware**	Fixed an issue where closing the Audio Hardware Setup window (e.g. for UR hardware) could lead to an application which could be no longer operated.
CAN-5692	**Steinberg Help**	Fixed an issue where the F1 key did not open the Cubase Help referring to steinberg.help.
CAN-5668	**System Link**	Fixed an issue where the cursor position was not synchronized while scrubbing with the mouse.
CAN-5669	**System Link**	Fixed an synchronization issue using a jog wheel followed by Fast Rewind / Fast Forward commands.
CAN-5894	**TrackVersions**	Fixed an issue where TrackVersions on Signature Tracks could exit the application.
CAN-6007	**Transport**	Fixed an issue that stops the recording when changing the Metronome volume.
CAN-3764	**Transport**	Fixed an issue where no values for all sorts of Transport control related items could be entered by key command if both Transport Panel and Transport Zone were closed.
CAN-4928	**Chord Track**	Fixed an issue where dragging Chord Event across a Divided Track List resulted in a misaligned event.
CAN-4940	**Chord Track**	Fixed an issue where "Follow Chord Track" was not working correctly.

Cubase 9.0.2

Improvements & issues resolved

The following list details resolved issues and improvements in this version. The Cubase 9.0.2 update only fixes issues in Cubase LE/AI/Elements. There is no 9.0.2 update for Cubase Pro and Cubase Artist.

ID #	Area	Issue
CAN-5753	Compatibility	Fixed an issue where the StudioEQ plug-in was not available in Cubase Elements 9.
CAN-3534	Compatibility	Fixed an issue where the Plug-in Sentinel in Cubase LE/AI 9 unnecessarily reported plug-ins being blacklisted which belong to Cubase Elements 9.

Cubase 9.0.1

Improvements & issues resolved

The following list details resolved issues and improvements in this version.

ID #	Area	Issue
CAN-4777	Compatibility	Fixed an issue where the parameter mapping of NI Komplete Kontrol and software stopped working properly.
CAN-5157	Control Room	Fixed an issue where the meters in the monitor section did not show activity.
CAN-5104	Editors	Improved the display of the black notes inside the editor work area to ensure they are drawn darker than the white keys.
CAN-4937	Editors	Fixed an issue where the beat subdivisions where not visible.
CAN-4727	MediaBay	Fixed an issue where tagging audio files with the "Key" attribute could render the application unreliable.
CAN-5058	MixConsole	Fixed an issue where it was not possible to add channels to an already existing Link Group.
CAN-4970	MixConsole	Fixed an issue where the last selected tab of the left zone was not visible after re-opening the MixConsole window.
CAN-5198	Plug-in Manager	Fixed an issue where text was cut off in Japanese language.
CAN-5353	Project Window	Added an "Add Track" dialog to allow adding multiple marker tracks at once.
CAN-5355	Project Window	Fixed an issue where the divided track list function did not work.
CAN-5356	Project Window	Fixed an issue where ruler tracks could not be created.
CAN-3593	Sampler Track	Fixed an issue where adding an audio file was not added to the pool if it was replacing an already loaded one.
CAN-5128	Sampler Track	Fixed an issue where the envelope sustain node changed after re-loading a project.

ID #	Area	Issue
CAN-5035	Sampler Track	Fixed an issue where importing audio files to the pool were placed in the Sampler Track subfolder.
CAN-4489	Sampler Track	Fixed an issue where loading Sampler Track presets after editing envelopes could render the application unreliable.
CAN-4607	Sampler Track	Fixed an issue where hovering over parameters in the Sampler Control tab with the mouse did not show values.
CAN-5407	Sampler Track	Fixed an issue where Sampler Tracks could not be controlled via remote devices.
CAN-5056	Transport	Fixed an issue where locating with the scrub tool did not work properly.
CAN-5113	User Interface	Fixed an issue where it was not possible to properly place windows to the top left corner (Windows only).
CAN-4357	User Interface	Fixed an issue where windows where sometimes opened with an offset on screen (Windows only).

Unresolved issues

ID #	Area	Issue
CAN-2946	Compatibility	32-bit plug-ins handled by "jBridge" to be bridged to 64-bit are unavailable in Cubase on PC Windows systems.

Cubase and jBridge as well as additional components such as the Plug-in Sentinel all need to be started with administrator privileges, however, this is not recommended. Please contact the plug-in vendors for updates to 64-bit versions of affected plug-ins.
