P-5786	The readability of long names in short audio clips has been improved.
P-5796	The contrast for the waveform pencil tool when editing in dark theme has been improved.
P-5799	The Silence Generator now always considers the used sample rate.
P-5797	The Level Meter no longer jumps unexpectedly when monitoring a static sine waveform.
P-5777	Splitting a stereo track into mono tracks now works as expected.

## WaveLab Cast 1.2.10

---

### July 2022

This version contains the following improvements and issue resolutions.

### Issues resolved

ID #	Issue
P-5692	Support for Microsoft Surface Dial has been added (Windows only).
P-5697	It is now possible to zoom on the waveform vertically by holding the middle mouse button and using the mouse wheel.
P-5696	It is now possible to zoom on the waveform vertically via the level ruler by holding the left mouse button and moving it to the left or to the right.
P-5542	Tooltip help links now work as expected.
P-5648	An issue related to importing files when two markers have the same time position has been fixed.
P-5694	The Level Normalizer option "Mix to Mono" now works as expected.
P-5679	A copy/paste issue for multitrack clip ranges has been fixed.
P-4763	Plug-in window toggle visibility by clicking on a plug-in slot now works as expected.
P-5680	WaveLab's main window can now be expanded over a second screen (Windows only).
P-5698	Apple Lossless files with .mp4 extension can now be imported.

## WaveLab Cast 1.2

---

### Juni 2022

This version contains the following improvements and issue resolutions.

### Improvements

The 1.2 update introduces Steinberg Licensing to WaveLab Cast, a new licensing system independent from the eLicenser technology. Learn more about Steinberg Licensing here:

<https://www.steinberg.net/licensing/>

Please note that encoding and decoding AAC files is not possible in WaveLab Cast 1.2. Support for this audio format will return to WaveLab Cast within a future update, but not for the WaveLab Cast OEM version.

WaveLab Cast 1.2 also includes Windows 11 and native Apple silicon support, plus several new features and improvements throughout the application. You can find a detailed list and description of all new features in the “New Features” chapter of the Operation Manual:

[https://steinberg.help/wavelab\\_cast/v1/en/wavelab/topics/new\\_features/new\\_features.html](https://steinberg.help/wavelab_cast/v1/en/wavelab/topics/new_features/new_features.html)

## Issues resolved

ID #	Issue
P-5583	You can now activate/deactivate audio montage effects in the plug-in window or when you right-click a plug-in in the Montage Effects pane in the Inspector window.
P-5594	When a clip has been resized, this is now indicated by the resized clip indicator, a small triangle in the top left/right corner of a clip.
P-5642	You can now quit WaveLab from the Startup dialog.
P-5582	Bypassed plug-ins in audio montages no longer consume CPU power when rendering.
P-5597	BWF reference time is now updated correctly when resampling.
P-5616	Changing the “Perform Short Fade In When Starting Playback” and “Perform Short Fade Out When Stopping Playback” options no longer requires you to restart WaveLab in order to take effect.

## WaveLab Cast 1.1.30

---

### February 2022

This version contains the following improvements and issue resolutions.

#### Issues resolved

ID #	Issue
P-5540	Rendering multiple tracks with effects no longer causes a rare error.
P-5506	Markers are now always copied when rendering a single audio montage track.
P-5505	The "Play Through Master Section" option in the Master Section now works as expected.
P-5501	Loudness Range boundaries in the Global Analysis dialog are available again.
P-5499	An issue has been resolved where certain WAV files could not be opened.
P-5494	Overwriting an existing recording no longer renders the application unreliable.
P-5491	The peak meter in the Master Level pane of the Master Section is now displayed correctly when the "Bypass Master Section" option is activated.
P-5489	Using the "Multiple Copies" option to paste the copied content in the Audio Editor now works as intended.
P-5397	An issue has been resolved where in some occasions the "Range of Active Video Clip" option was disabled.
P-5479	Adjusting volume faders in the Master Section and the Inspector has been improved.
P-5467	An alignment issue with the command buttons on the plug-in header when using the plug-in chain mode has been resolved.
P-5463	Dragging a marker in the Audio Montage window now shows a vertical guideline.
P-5543	Renaming a file that has been exported from Cubase no longer renders the application unreliable.
