## Padshop 2.3.0

| ID          | Area       | Issue                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| New Feature | UI Scaling | <p>The <b>UI Scaling</b> option on the <b>Options</b> menu allows you to adjust the size of the user interface from -50% to +100% in 12.5% increments. This allows you to scale the user interface on native 4K monitors for better readability, for example.</p> <p>When using Padshop in Cubase/Nuendo, the available maximum and minimum scaling factors depend on the <b>Application Scaling</b> value that is set on the <b>User Interface</b> page in the Cubase/Nuendo <b>Preferences</b> dialog. For example, if <b>Application Scaling</b> is set to +50% in Cubase, the plug-in can only add a maximum of +50%.</p> <div>NOTE</div> <p>When using Cubase 15 and higher, <b>User Interface Scaling</b> must be applied via the <b>Functions</b> menu, which is located in the Padshop plug-in header.</p> |
| New Feature | Load Panel | <p>Padshop now offers a dedicated <b>Load</b> panel. The <b>Load</b> panel is based on Steinberg's <b>MediaBay</b> technology and allows you to navigate to files and load them.</p> <p>The <b>Samples</b> tab on the <b>Load</b> panel allows you to search for samples registered to the <b>MediaBay</b>.</p> <p>You can dock/undock the <b>Load</b> panel. The dock/undock state is saved with the host project.</p>                                                                                                                                                                                                                                                                                                                                                                                            |

| ID          | Area       | Issue                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| New Feature | Load Panel | <p>The <b>Max MediaBay Results</b> option on the <b>Options</b> menu allows you to specify the maximum number of results displayed in the results list on the <b>Load</b> panel.</p> <p>When the number of search results on the <b>Load</b> panel exceeds the number specified on the <b>Options</b> menu, the <b>Show All</b> button allows you to view the unlimited list of results.</p> |
| New Feature | Load/Save  | In the <b>Save</b> dialog, the <b>Copy MediaBay Attributes</b> option on the context menu for presets allows you to use the attributes of existing presets when saving new ones.                                                                                                                                                                                                             |
| HALLY-11473 | General    | Fixed an issue that could cause <b>Enable Mod Wheel</b> to malfunction.                                                                                                                                                                                                                                                                                                                      |
| HALLY-11687 | Load/Save  | Fixed an issue that caused the preset name in Padshop to disappear when saving a Cubase project.                                                                                                                                                                                                                                                                                             |
| HALLY-1662  | General    | Fixed a crash that occurred during startup under Bitwig.                                                                                                                                                                                                                                                                                                                                     |
| HALLY-10196 | General    | Fixed a crash that occurred when using Padshop in Studio One.                                                                                                                                                                                                                                                                                                                                |

## Padshop 2.2.0

| ID          | Area             | Issue                                                                                                                                                                                                                  |
|-------------|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Feature     | Content Browsing | Padshop now offers a new built-in Steinberg MediaBay Load and Save dialog that also supports hosts other than Cubase.                                                                                                  |
| HALLY-9471  | macOS            | Fixed an issue on Apple Silicon.                                                                                                                                                                                       |
| HALLY-10139 | Import/Export    | The <b>Allow any Preset location</b> option has been removed from the <b>Import/Export Presets</b> menu. Saving and loading is now possible via the <b>File System</b> tab in the <b>Save</b> and <b>Load</b> dialogs. |

---

| ID          | Area    | Issue                                                                                      |
|-------------|---------|--------------------------------------------------------------------------------------------|
| HALLY-10128 | Windows | Fixed a crash that occurred when saving a program with “Controlled folder access” enabled. |
| HALLY-9955  | General | Fixed a crash that occurred when using samples from Sequel content.                        |

---

### Padshop 2.1.0

---

| ID      | Area      | Issue                                      |
|---------|-----------|--------------------------------------------|
| Feature | macOS     | Padshop now supports native Apple Silicon. |
| Feature | Licensing | Padshop now supports Steinberg Licensing.  |

---

### Padshop 2.0.30

---

| ID                                 | Area        | Issue                                                                                  |
|------------------------------------|-------------|----------------------------------------------------------------------------------------|
| HALLY-8507, HALLY-8629, HALLY-8589 | General     | Fixed a crash that sometimes occurred when loading presets in Cubase.                  |
| HALLY-8601                         | Arpeggiator | Fixed an issue that resulted in incorrect <b>Swing</b> settings after loading presets. |
| HVIS-8392                          | General     | Fixed the functionality of the <b>Retrigger Mode</b> setting <b>First</b> .            |

---

### Padshop 2.0.20

---

| ID           | Area  | Issue                                                                      |
|--------------|-------|----------------------------------------------------------------------------|
| Improvements | macOS | Padshop is now compatible with macOS Big Sur on Intel Systems.             |
| HVIS-2529    | HiDPI | Padshop now supports Windows display scaling factors in increments of 25%. |

---

| <b>ID</b>  | <b>Area</b> | <b>Issue</b>                                              |
|------------|-------------|-----------------------------------------------------------|
| HALLY-8398 | General     | Fixed the disabling function of the Mod Wheel assignment. |

---

**Padshop 2.0.1**

---

| <b>ID</b>  | <b>Area</b>     | <b>Issue</b>                                                                                                 |
|------------|-----------------|--------------------------------------------------------------------------------------------------------------|
| HALLY-8111 | Import / Export | Fixed an issue that resulted in presets loaded via drag and drop being imported into the user preset folder. |
| HALLY-8110 | General         | Fixed an issue resulting in sample playback interruptions with 32-bit float samples.                         |
| HALLY-8070 | General         | Fixed an issue resulting in lost Enable Mod Wheel settings for presets inside VST Sound files.               |
| HALLY-8057 | General         | Fixed a crash that sometimes occurred when stepping through presets.                                         |
| HALLY-8049 | General         | Improved loading speed for presets that are based on longer samples.                                         |

---
