Cubase 10.5.12

List of resolved issues

The following list details resolved issues and improvements in this version:

ID #	Area	Issue
CAN-27509	ASIO Guard	We resolved a performance issue that lead to ASIO overloads under certain conditions on both Windows and macOS.

Cubase 10.5.11

List of resolved issues

The following list details resolved issues and improvements in this version:

ID #	Area	Issue
CAN-27408	STABILITY	We closed a memory leak that caused stability issues on macOS systems.

Cubase 10.5.10

List of resolved issues

The following list details resolved issues and improvements in this version:

ID #	Area	Issue
CAN-26095	ARA	Copying ARA-edited events to other tracks no longer renders the application unreliable.
CAN-24400	ARA	An issue has been resolved where multiple ARA-processed audio events could cause a delay when listening to ARA-processed data.
CAN-24829	ARA	An issue has been resolved where ARA-edited audio events played back even when muted.
CAN-24067	ARA	An issue has been resolved where ARA-edited audio events played back when opening MIDI editors with "Solo Editor" activated.
CAN-26886	Import	Importing AAF files no longer renders the application unreliable.
CAN-26648	MediaBay	Tagging media with the attribute "Bars&Beats" now works as expected.
CAN-22181	MediaBay	Improved stability for MediaBay when accessing NAS file servers.
CAN-26126	MixConsole	MIDI tracks are no longer displayed in the list for selecting a comparison channel in the Channel Settings window.
CAN-24828	MixConsole	Reopening a Workspace involving the MixConsole and channel visibility list no longer renders the application unreliable.
CAN-26309	Plug-ins	The manual mode of Frequency and Q-Factor in the ModMachine plug-in now works correctly.
CAN-26375	Plug-ins	The automation of effect parameters in the MultiTap Delay plug-in now works correctly.
CAN-26663	Plug-ins	The DeEsser, RoomWorks and StereoDelay plug-ins no longer show duplicate factory presets.

ID #	Area	Issue
CAN-26016	Plug-ins	The order of the effects in the VST Amp Rack and VST Bass Amp plug-ins can now be changed again in the usual way.
CAN-25827	Pool	Emptying the Trash after removing unused media no longer renders the application unreliable.
CAN-25583	Project Window	With "Combine Selection Tools" activated, double-clicking between markers in the range now results in a range selection.
CAN-25877	Project Window	Replacing VST instruments on tracks that are set to Mute or Solo no longer renders the application unreliable.
CAN-25089	Recording	Playing MIDI notes and using the pitch bend wheel at the same time no longer results in hanging notes.
CAN-25841	Remote Devices	Deleting the selected entry within the Generic Remote page now works correctly.
CAN-26478	Remote Devices	Adding and deleting entries within the Generic Remote area no longer renders the application unreliable.
CAN-23624	Sample Editor	Using the FreeWarp tool in the Sample Editor with several open audio events and "Show All Selected Audio Events" activated no longer generates graphical glitches.
CAN-17372	Sampler Track	Drag&Drop of a selected range of audio from the media preview area into an empty sampler track control area now works.
CAN-17372	Sampler Track	Transferring samples from the sampler track to Padshop 2 now works as expected.
CAN-25755	Score Editor	An issue has been resolved where inserting a note did not give acoustic feedback.
CAN-26149	Score Editor	Splitting multi-rests now works correctly.
CAN-26695	Score Editor	Score Settings > Accidentals > Enharmonic shift for entire bar no longer creates redundant accidentals.
CAN-25640	Stability	Opening file selector windows on macOS systems no longer renders the application unreliable.

ID #	Area	Issue
CAN-26093	Track Import	An issue has been resolved where importing tracks from large projects could take longer than expected.
CAN-772	Track Import	Expression Maps can now be imported via the "Import Tracks from Projects" function.
CAN-26739	Track Export	An issue has been resolved where VCA tracks were not exported with track archives if VCA tracks were placed outside of their device folder.
CAN-25244	Track Export	Track archives no longer lose their routing information to other channels when exported. Affected track archives exported with Cubase 10.5.0. must still be newly created.
CAN-26682	User Interface	An issue has been resolved where the UI performance could get impacted on macOS systems after several hours of using the application.
CAN-26094	User Interface	An issue has been resolved where options selected in drop-down menus were not correctly shown on the UI.
CAN-25901	Video	Video export now works correctly if the file path contains special characters (such as German umlauts).
CAN-25061	Video	An issue has been resolved where exporting video could stall the application.

Cubase 10.5.5

List of resolved issues

The following list details resolved issues and improvements in this version:

ID #	Area	Issue
CAN-26368	Performance	Fixed an issue which could lead to a lag of user interface responsiveness (macOS Mojave only).
